

amobi

Driver seats manufacturer for specialized vehicles

PNEUMATIC SUSPENSION

SUSPENSION is the key element for the performance of our seats. The pneumatic suspension system is proven to reduce exposure to vibrations. Two shock absorbers are positioned to reduce mechanical interference and ensure maximum stability for the entire assembly.

Thanks to AMOBI's exclusive ball-bearing assembly, the suspension system is built to accrue hours of operation while maintaining the same high quality of service.

Lever

Built-in 12 V/24 V compressor

Universal anchoring platform

AMOBI, manufacturer of operator seats for specialized vehicles, offers a range of products that combine comfort, durability and performance. The most intense working conditions are the inspiration for our know-how.

Our industrial seats ensure the operator's comfort and meet the requirements of operations managers and maintenance. Our technical solutions are designed to protect moving parts. They offer modular design and vibration reduction thanks to moulded high density foam. Our innovative use of pneumatic systems are what set apart the AMOB I 100% pneumatic seat.
